## Additional Forecast Information

Plenty of rain for Wednesday as the cold front pushes eastward. We clear out for Thursday as high pressure regains control through Saturday afternoon.

Clouds increase Saturday afternoon & evening ahead of the next system that will bring rain to the area. A warm front will not be too far to the south of the area. If the system tracks a little further north, temperatures on Sunday could be 6-8 degrees warmer. This system moves out on Monday with high pressure building back into the area by Tuesday.

Temperatures will be a slightly below normal for the second half of the week and the weekend before returning to slightly above normal early next week and falling below normal again by the middle of the week. A return to well above normal temperatures is possible by February 4<sup>th</sup> and 5<sup>th</sup>.
